### IN THE SPECIFICATION

Please replace the paragraphs below with the amended paragraphs as follows:

On page 9, beginning lines 18-23:

B1  
For example, messages between the switch controller SWC-A 310<sub>A</sub> and the primary head-end controller 130<sub>1</sub> may be sent bi-directionally via signal path 317<sub>A</sub>, through the first Ethernet switch 144<sub>1</sub>, and then through signal path 119<sub>1</sub>. Similarly, messages between the switch controller SWC\_B 310<sub>B</sub> and the primary head-end controller 130<sub>1</sub> 119<sub>1</sub> may be sent bi-directionally via signal paths 317<sub>B</sub>, through the second Ethernet switch 144<sub>2</sub>, and then through signal path 119<sub>2</sub> paths 119<sub>2</sub>. Likewise, communications between the secondary switch controller SWC-B 310<sub>B</sub> and the secondary head-end controller 130<sub>2</sub> may be provided in a similar manner, as shown in FIG. 1.

On page 11, beginning lines 17-29:

B2  
During operation, in an exemplary embodiment I/O port 1 320<sub>1</sub> pings I/O port 2 320<sub>2</sub> first, then 5 milliseconds later pings I/O port 3 320<sub>3</sub>, then 5 milliseconds later pings I/O port 4 320<sub>4</sub>, and continues in this manner through I/O port 16 320<sub>16</sub> before repeating the cycle, i.e., in a "round robin" process. [ [ . ] ] In addition, the other I/O ports 2 through 16 320<sub>2</sub> through 320<sub>16</sub> are likewise pinging one another in a similar manner. Furthermore, a few fractions of a millisecond after each ping is sent, 16 acknowledgements are being sent from the recipient I/O port 320 back to the originating I/O port. Once an I/O port has consecutively pinged the other 15 I/O ports, a cycle has been completed. Thus, during each 5-millisecond interval, 16 individual pings and corresponding acknowledgements are being passed through the switch matrix 306<sub>A</sub> of the primary switch controller 310<sub>A</sub>. Therefore, during the course of one complete cycle (i.e., 75 milliseconds) the switch matrix 306<sub>A</sub> functions as a 16x16 array, and will have transferred 240 pings and 240 acknowledgement signals.
